

Sr No.	Error	Error Line Number	Error Type	Solution
1	averageSales = totalSales / 5; performs integer division, losing the decimal part	21	Logical Error (Wrong Formula)	Use averageSales = totalSales / 5.0f; (or cast to float) to get a correct decimal average.
2	printf("Average Sales = %d\n", averageSales); uses %d for a float variable	23	Type Mismatch (Format Specifier Error)	Use %f instead of %d, e.g. printf("Average Sales = %.2f\n", averageSales);
3	if(sales[i] < highestSale) finds the lowest sale even though the variable is named highestSale	31	Logical Error (Wrong Condition)	Change the comparison to if(sales[i] > highestSale) to correctly find the highest sale.
4	monthlySales[5] = 250; writes outside the array (size 5, valid indices 0-4)	49	Array Bounds Error (Runtime)	Increase array size to monthlySales[6] or remove this out-of-range assignment.
5	for(int i=0;i<=5;i++) reads monthlySales[5], which is out of bounds	53	Array Bounds Error (Runtime)	Change loop condition to i<5 so only valid indices are accessed.
6	strcpy(product,"LaptopComputer"); string (14 chars+null) is larger than product[8]	62	Runtime Error (Buffer Overflow)	Increase array size, e.g. char product[20]; or use a shorter string.
7	category = "Electronics"; tries to assign a string literal directly to an array name	70	Type Mismatch (Invalid Assignment)	Use strcpy(category, "Electronics"); to copy the string into the array instead of assigning.
8	stock["first"] = 100; uses a string literal as an array index	78	Compile-Time Error (Invalid Array Subscript)	Use a valid integer index, e.g. stock[0] = 100;
9	stock[2.7] = 200; uses a non-integer (float) array index	80	Compile-Time Warning/Error (Invalid Array Subscript)	Use an integer index, e.g. stock[2] = 200;
10	scanf("%d", orders[i]); passes the value instead of the address of the element	100	Type Mismatch (Wrong Argument Type to scanf)	Use scanf("%d", &orders[i]); to pass the address of the element.
11	if(revenue[2] = 3000) uses assignment (=) instead of comparison (==)	118	Logical Error (Wrong Condition)	Use if(revenue[2] == 3000) to correctly compare the values.
12	backupRevenue = revenue; tries to assign one array directly to another	127	Compile-Time Error (Invalid Array Assignment)	Copy elements individually in a loop, or use memcpy(backupRevenue, revenue, sizeof(revenue));
13	printf("%d\n", commission[0]); uses %d for a float array element	137	Type Mismatch (Format Specifier Error)	Use %f instead of %d, e.g. printf("%.2f\n", commission[0]);

Sr No.	Error	Error Line Number	Error Type	Solution
14	city = "Jaipur"; tries to assign a string literal directly to an array name	143	Compile-Time Error (Invalid Assignment)	Use strcpy(city, "Jaipur"); to copy the string into the array instead of assigning.
15	printf("%s\n", branch); branch[] is filled with only 4 characters and never null-terminated	156	Runtime Error (Missing Null Terminator)	Add branch[4] = '\0'; (and size the array as branch[6] or larger to fit it).
16	for(int i=0;i<=5;i++) writes employees[5], which is out of bounds (size 5, valid 0-4)	162	Array Bounds Error (Runtime)	Change loop condition to i<5 so only valid indices are accessed.
17	strcpy(department,"Marketing"); string (9 chars+null) is larger than department[6]	178	Runtime Error (Buffer Overflow)	Increase array size, e.g. char department[12]; or use a shorter string.
18	expenses = sales; tries to assign one array directly to another	186	Compile-Time Error (Invalid Array Assignment)	Copy elements individually in a loop, or use memcpy(expenses, sales, sizeof(sales));
19	ratings[-1] = 5; uses a negative index, writing before the start of the array	194	Array Bounds Error (Runtime, Negative Index)	Use a valid non-negative index within 0 to 4, e.g. ratings[0] = 5;
20	printf("%s\n", feedback[0]); feedback[0] is an int, not a string, used with %s	208	Type Mismatch (Wrong Format Specifier)	Use %d instead of %s, e.g. printf("%d\n", feedback[0]);
21	printf("Report Generated Successfully\n") is missing a terminating semicolon	212	Syntax Error (Missing Semicolon)	Add a semicolon at the end: printf("Report Generated Successfully\n");
